1 - EdVerso International

EdVerso International, later only EdVerso, is an independent organization based in Switzerland, active in more than 20 countries, that provides Culture, Education, and Work promotion and development. It follows the United Nations Standards, as described in its Statutes.

EdVerso is independent and it is not governed by any third parties or companies. It operates freely according to its judgments.

To move out of its institutional activities, it was determined, still in the constitution stage, to use "Technology" as a new "Rosetta Stone" for the world of Training and Work. Thanks to the correct identification of the parties (KYC) - Training Institutions, Students, Workers, and Companies - and to the Blockchain technology - which guarantees timestamp and data immutability - EdVerso in partnership with LutinX.com, presents an independent online system, transversal, free consultation and multi-language, for the verification of Skills, Professional Titles - for Recognized and Unrecognized professions.

Accreditation guarantees that the training is provided by a real institution, verified, and publically verifiable worldwide.

Accreditation is the certification for the training institution that allows it to issue formal and non-formal certifications, verifiable in the world, effectively offering a unique added value to all its trainees. The accredited body can issue certifications in Blockchain verifiable anywhere, allowing its students to access new and ever-growing job opportunities well beyond the borders of their city, promoting new job opportunities, local or remote.

EdVerso acts as a super-parties validator for training companies and institutions for their activities, anywhere in the world. There are some use cases:

- The Accredited Center rises above competitors who still operate with paper-based qualifications and on a local basis;
- Thanks to LutinX.com, an employer can review a candidate's skills and verify them in real-time, simply and free of charge;
- The Student or the Employee will always hold their original qualifications for all their life, with the sharing possibility with anyone they want, anytime anywhere;
- Professional Repository offers new added value to their members, effectively extending their business opportunities at a national and international level;
- Professional qualifications can be verified regardless of province, region, or state in which the professional association is present;
- Specialist Organizations, not identified in Legal Orders, actually expand their potential beyond regional and national borders;
- Unrecognized professional qualifications can have new life and economic value with LutinX and EdVerso. A Counselor, an Oncological beautician, an E-Commerce manager, or one of the many new professions, not present in National Registers, can be verified independently.

Finally, EdVerso International offers the possibility inside any country to activate new independent "Chapters" under the Swiss guidelines for better territorial coverage.

2 - LutinX.com

LutinX.com is the Blockchain Platform, chosen by Edverso, for the issuance of qualifications based on the legal identification of the parties involved in the training process, Institutions, and Learners.

LutinX.com operates worldwide on Education, Intellectual Property, and CyberSecurity. Our services are directly available online for private and corporate users. The platform delivers to every active account, even the free one, access to customized suites of blockchain applications, and a main personal repository, called "The Booklet®".

The Booklet® is a protected environment where private users can receive, manage, archive, share (and delete) their formal and non-formal certifications regarding their training and professional activities, proving their lifetime Skills. Inside the Booklet, it is still possible to archive legal documents exchanged between various people, companies, and institutions; save ideas, projects, and inventions protecting intellectual property; keep sports and medical records and more personal data.

LutinX.com is the Public Utility Structure that validates reports, skills, statements, and documents between users around the world. Thanks to its public interface, it allows free, real-time certificate verification issued to every user. It works like a compensation platform between users to ensure the neutrality and correctness of the information internally exchanged.

At the current time, the Platform is designed to protect ideas (intellectual property), keep track of personal and professional skills acquired (based on formal declarations from the relevant organizations), and supply-chain tracking records, even if we talk about education, food, health, chemical, industrial or generic meta data.

In the Edverse project, LutinX.com is the environment where the parties operate and exchange specific data to enhance themselves, enhance the skills released, and promote the employment processes of the people who are part of it.

The organization accredited in EdVerso can be verified on the LutinX search engine, through HashCode, Company Name, VAT number or Tax Code, and of course its LiD, directly selecting the "Membership" option from the home page.

3 - Goals

EdVerso responds to the growing demand of the market to provide worker mobility and skills verifications. We support Schools, academies, and Training centers to offer high-value recognition to their students, increasing the trust in their certifications. The digital credentials issued will verify the Identity of the issuer offering community welfare too.

Being Accredited guarantees two key elements: 1) Assuring the existence of the Issuer, reporting a simple analytical file, for clear consultation, indicating the national validation parameters (such as enrollment in Regional or Ministerial Registers) in multi-language; 2) Ensuring that the Issuer shares values oriented towards the protection and growth of people, that it respects the human rights sanctioned by the United Nations, that it works for the improvement of society and that it carries out its work in compliance with the Environment for the Sustainability of the Planet.

Accreditation still promotes the development of the entire economic and social system, supporting the competitiveness of the international markets.

EdVerso also offers accreditation to diplomatic structures, such as consulates and embassies, as it allows for an impressive reduction of the workload - based on the verification and authentication of educational qualifications for their citizens.

A Consulate and an Embassy, working with EdVerso using the LutinX blockchain technology is the opportunity to maximize their budgets, reduce expenses, and improve the quality of their securities authentication services by over 80%.

Being Recognized by EdVerso is VOLUNTARY and is NOT required by any national and/or international regulation or law.

4 - Principles

EdVerso follows fundamental principles that provide value to its new ecosystem. Being part of Edverso means bringing your organization into the Web with international credibility and verifiability. We provide:

IMPARTIALITY

EdVerso operates without third-party inference. The party's legal identity is verified using KYC procedures thanks to the LutinX Platform. Furthermore, our staff verify in person the documentation provided by the applicants before the evaluations.

NO CONFLICTS OF INTEREST

EdVerso has no shareholdings and/or interests in training bodies and/or professional registers in Switzerland or any other country in the world. EdVerso is a no-for-profit reality.

COMPETENCE

EdVerso evaluates the experience and professionalism of the active employees in the entities requesting accreditation, according to the specific operating sectors.

RESPONSIBILITY

EdVerso guarantees accurate controls on the documentation proposed by the Organizations, undertaking to improve its procedures and controls year after year.

CONFIDENTIALITY

The documents received by EdVerso for accreditation are confidential and in compliance with national and international laws. EdVerso is also authorized to retain a copy to protect its ecosystem.

CLAIMS MANAGEMENT

In the event of disputes by third parties, institutions, companies, and consumers, Edverso may temporarily suspend accreditations, even if already granted, pending verification of its inspection activities.

OPERATIONAL CONTROLS

EdVerso undertakes to randomly check the certificates issued by the Accredited Bodies in the LutinX system, reserving the right to notify any anomalies to the Organization and/or request corrective actions regarding the certificates and the BBadges issued through the Bodies and/or Registers. EdVerso can also proceed to report to the national authorities in case of anomalies and/or false declarations.

CERTIFICATION AND VERIFICATION (GBPI)

EdVerso undertakes, for the Institutions that request it, to issue them professional certifications - after validating tests - and annual renewals. Accredited Bodies can use GBPI service for their annual affiliation and social activities, in a transparent way, guaranteed by our trusted referral system.

5. La Sostenibilità

Signed in 2015 by all countries, the UN Agenda 2030 provides a global framework of reference for policies aimed at pursuing sustainable development from an economic, social, environmental, and institutional point of view, to ensure a balance between the needs of current generations and those of future generations. The 2030 Agenda consists of 17 Sustainable Development Goals and 169 Targets.

EdVerso about the 2030 Agenda operates transversally concerning Objective 4 Quality Education, Objective Gender Equality, and Objective 16 Peace Justice and Solid Institutions. In this context, training plays an important role both in increasing awareness of sustainable development issues and in developing the skills needed in the public and private world of work.

EdVerso works closely with national and international bodies to promote human rights and social equality, which are always found synergistically in the promotion of knowledge and training.

Indeed, we live today in a period of enormous challenges for sustainable development. Billions of citizens continue to live in poverty and are deprived of a life of dignity. Inequality is growing both within and between countries. There are huge differences in opportunities, wealth, and power. Gender inequality continues to be a key challenge. Unemployment, especially youth unemployment, is a priority. Global threats to health, increasingly frequent and violent natural disasters, spiraling conflicts, violent threats, terrorism, humanitarian crises, and the resulting forced displacement of populations threaten all progress in the development of the last decades. The depletion of natural resources and the negative impacts of environmental degradation, including desertification, drought, land degradation, water scarcity, and biodiversity loss add to and increase the list of challenges facing humanity. Climate change is one of the greatest challenges of our time and its negative impact compromises the ability of states to implement sustainable development. Global temperature rise, sea level rise, ocean acidification, and other consequences of climate change are seriously jeopardizing coastal areas and countries below sea level, including many least developed and small island developing states. The survival of many societies and biological support systems of the planet is at risk.

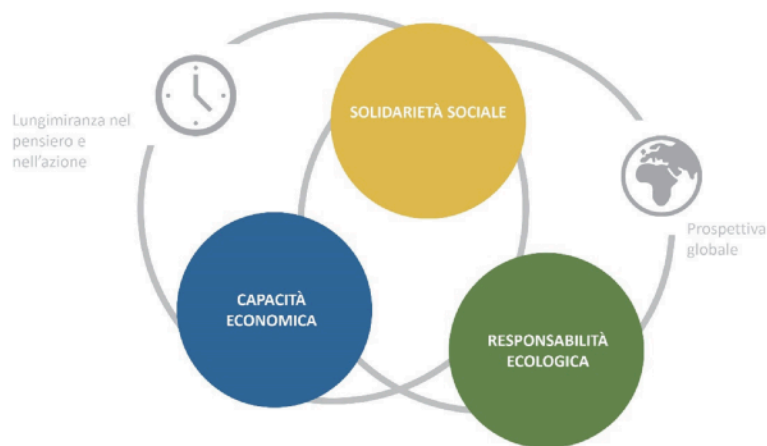

At the same time, our age offers great opportunities. Significant progress has been made in addressing development challenges. In past generations, thousands of people have risen out of extreme poverty. Access to education has significantly increased for both boys and girls. The diffusion of mass media and information and interconnection makes it possible to accelerate human progress, bridge the digital divide, and develop knowledge-based societies, as well as scientific and technological discoveries in sectors as diverse as medicine and energy.

EdVerso International and its actions find themselves in this situation. For us, technology is the key to human innovation and brings it to the good and growth of our communities. With education, all challenges can be solved, developing sustainable, lasting, and inclusive economic growth. EdVerso works to build a dynamic, sustainable, innovative, and people-centered ecosystem, promoting in particular the access of young people to the world of work, the economic legitimacy of women, and the enhancement of personal and professional skills.

Operating today in over 20 countries, from Europe to Africa, from South America to Asia, we are creating a virtuous environment where the declarations and the Value are objective, to thus benefit from an educated staff, possessing adequate knowledge and skills to perform productive and fulfilling work, with full participation in society.

5.1 What does sustainable growth mean?

Sustainable development is the development capability of ensuring the satisfaction of the needs of the present generation without compromising the possibility of future generations realizing their own. It aims to strengthen economic capacity and social solidarity within the ecological limits of the planet and to take equal account of the three dimensions in a balanced and integrated way. The consequences that today's action will have on the future must be incorporated into the reasoning, considering the interests of all the inhabitants of the planet.

The economy and the world of work play a crucial role in sustainable development. In these environments, production processes and the use of resources are decided and these decisions have a significant impact both locally and globally. Furthermore, the world of work and professions is the place where innovations and transformation processes can be encouraged to promote sustainable development. Many professions also influence consumer behavior through the way they advise customers and design their products and services.

5.2 Sustainability and professional training

Professional training is based on the developments that characterize the world; this ensures that future professionals acquire the skills required by the labor market. Within the development process, the professions are defined and developed by the bodies responsible for basic professional training and higher professional training, and the related qualifications are regulated by the different countries in which the training institutions operate. The responsible bodies can launch inputs in a long-term perspective and thematize the aspects related to sustainability. In EdVerso we intervene at this level, helping the responsible bodies to integrate sustainable development into their regulatory and operational acts.

Future-oriented professions take into account the needs and opportunities of sustainable development and need a well-trained workforce and professionals. By integrating the relevant aspects of sustainability into their regulatory acts, the responsible bodies ensure that the young talents are suitably qualified and promote professionalism combined with a sense of responsibility. The possibilities for influencing sustainable development vary depending on the educational level and field of activity. From the point of view of content, professional training is oriented toward business practice and at the same time anticipates economic, social, and technological innovations. As part of the process of developing vocational training, each responsible institution decides on its initiative to what extent and in which areas its profession must take into account the requirements of sustainable development. Addressing sustainable development issues and problems provides the opportunity to further consolidate existing good practices and to address new aspects within the development of vocational training. EdVerso is a useful support for this purpose.

In primary vocational training, the results of the sustainability analysis are incorporated into the qualification profile, in particular in the occupational profile and, if necessary, in the description of the work situations and the formulation of the evaluation objectives of each training location. In doing so, attention must be paid to the level of competence and the effective possibility of influencing the practice of the profession.

In higher vocational training, aspects of sustainable development are also illustrated in the qualification profile. In the occupational profile, the contribution of the profession to society, the economy, and the environment as dimensions of sustainability is defined in a general way. The concrete integration of sustainability-relevant aspects takes place in the formulation of operational competencies or performance criteria based on the corresponding occupational activity.

EdVerso thanks to its analysis, verification, and protocols of strategic data, for the social and professional development of workers, wants to be a Strategic Partner at an international level for all the Organizations, Registers, and Associations that work to improve the training and professional quality of their students and associates.

5.3 Economic Dimension

Endless, inclusive, and sustainable economic development is an essential prerequisite for the spread of well-being, the eradication of poverty, and the prudent use of resources. At the same time, the preservation of natural resources is a necessary condition for guaranteeing economic prosperity. As key players in the economy, professionals make an essential contribution to this development. The topics in focus are the following:

- **Cost-effectiveness and added value:** The search for long-term cost-effectiveness and productivity at the company level is the prerequisite for the creation of added value and the promotion of employment at a local level and worldwide;
- **Innovation and training:** Innovation is the engine of long-term economic growth and the prerequisite for the development of forward-looking, efficient, and resource-saving solutions; training and lifelong learning are the foundation on which the possibility for a human being to shape his present and future rests;
- **Mobility and logistics:** The mobility of people and goods is an essential need of society and a condition for the functioning of the economy; efficient, safe, and ecological mobility and logistics are cornerstones of sustainability.

5.4 Social Dimension

We need fair and inclusive societies, with social cohesion, and solidarity to realize human beings' potential and benefit from equal opportunities. Through the profession of each other, we can promote fair and inclusive forms of work, thus helping to allow everyone to live in dignity and to be useful to the economy, society, and the environment. The main topics are:

- **Working conditions:** fair and healthy working conditions, as well as respect for human rights and individual dignity throughout the value chain are the indispensable foundations for guaranteeing sustainable production processes and a rewarding life.
- **Health and well-being:** Physical, mental, and social well-being is the prerequisite for a rewarding life; justice, social cohesion, and an intact environment are the prerequisites for a healthy life.
- **Equal opportunities:** justice between current and future generations as well as between current generations living in the countries in which we operate is a key element of sustainable development; equal opportunities, non-discrimination, and social inclusion are indispensable prerequisites for the realization of human potential and for the promotion of well-being on a global level.

5.5 Sustainable development as a transversal task

The dimensions of sustainability are interconnected, interact with each other, or influence each other. If economic and social activities must take place within the ecological limits of the Earth, conflicts can nevertheless arise between objectives. For example, between economic growth and the prudent use of resources, between the satisfaction of social needs and the protection of the natural foundations of life, between profit maximization and social justice. However, there are also synergies between the different dimensions of sustainability. For example, efficient use of resources can have a positive impact both economically and environmentally. Sustainable development therefore always consists in examining the issues related to the various dimensions of sustainability in a correlated way and their complexity, identifying synergies and interactions. **Sustainable development is therefore to be understood as a multidisciplinary task that requires the ability to weigh different interests and to address conflicting objectives.**

6 - Accreditation, GBPI Certification and Affiliation

Accreditation, GBPI Certification, and Affiliation are three specific activities carried out by EdVerso, which imply different responsibilities of the operators, based on the areas of competence and the applicable rules. Accreditation is preparatory to Certification and Affiliation.

6.1 ACCREDITATION

It is for training institutions registered in the appropriate regional and national registers, higher technical institutes, and related foundations; Higher secondary schools registered with the Ministry of Education; public and private universities and research centers; professional qualification centers and joint structures. EdVerso guarantees with the accreditation that the accredited subjects exist, and have adequate personnel, as well as structures suitable for carrying out the declared activity.

The accreditation does not concern the certification of the training actions provided by a single accredited body.

The accredited organizations are subjected to periodic planned checks, even after the issue of the accreditation certificate to EdVerso, to ensure that the compliance requirements attested with the accreditation continue to be respected.

The accredited bodies benefit from the following advantages:

- access to agreements with third-party operators and commercial, public, and/or private subjects;
- access to updated information about new training processes, public rules, and regulations in the fields of training and certification of skills;
- free participation in updating webinars on legal and technical topics in the sectors of Training and Certification of Skills;
- access to the possibility of issuing, without the purchase of any license or payment of any fee, BBadges in Blockchain certifying professional qualifications and specializations, registration in associations and registers, or even proof of passing exams or issuing credits formative.

6.2 GBPI CERTIFICATION

The GBPI Certification consists of a BBadges issued by EdVerso, through the Blockchain LutinX.com platform, certifying learner/professional skills and knowledge according to the parameters defined by the Accredited Body.

EdVerso with this Service offers the Accredited Organization the possibility of issuing Digital Credentials - online accessible, in a transparent, objective, and secure way - without buying new licenses, training, and other connected costs.

Using EdVerso for your Certifications is also a great solution for the Organization's Marketing and Communication activities, as the decisive diffusion of digital Credentials - centralized within a global system - allows the simultaneous increase of the Organization's presence on the Web, with the generation of hundreds or thousands of back-links to the institution's website. EdVerso, in collaboration with LutinX, offers new, digital value to Accredited Parties, reducing costs, and increasing your profits.

The GBPI Certification service is also functional for all the activities of renewing the Certifications in their various forms, as well as maintaining them, in terms of Training Credits.

Moreover, you can provide asynchronous lessons followed by a digital test. If passed, the system will generate automatically a BBAge for every one of your users/subscribers.

The same certification may also offer a PDF file according to the DigiCompEdu - the European standards on the subject of micro-credentials, recognized throughout the European Union.

All the Certifications issued by EdVerso will also be available to the Organization, directly within your account, granting access to all elements of the BBadges issued.

A copy of the BBAge - in Blockchain - will also be available to the learner/professional, who will receive it by Email, and archived inside his/her Booklet.

The BBadges issued by EdVerso contain the following information:

- Issuer: EdVerso International ^A
- Accredited Organization: [name + active link to its website] ^A
- Learner/Professional Name: [identity may not be verified] ^B
- Issue Date: [Blockchain timestamp]
- Certificate Verification: [active link to the Blockchain Explorer for real-time verification]
- Description: [description of the qualification issued, including the present year] ^C
- Expertise/Specialization/Qualification: [title acquired] ^C
- Graphic element: [BBAge graphic design in vector format, created in collaboration with the Accredited Organization] ^C

^A, It will be present a blue verified icon certifying that the identity has been previously verified.

^B, Learner/professional identity verification is not mandatory. If unverified, it will be present, near the user name, a Red icon. If the user will verify its identity, the icon will change in the blue one.

^C, Data defined between EdVerso and the Organization at the time of assignment.

6.3 AFFILIATION

Affiliation is a very powerful service for Accredited Organizations. EdVerso can manage your own Affiliation/Association process, solving five big problems: 1) Reduction of workload for membership renewals; 2) Improvement of cash flows for better and optimal financial planning; 3) Automatic issue of Enrollment and Renewal certificates, through the BBadges; 4) Access to Automated Marketing tools to promote new activities, without license costs; and 5) Visibility for your subscribers - without progressive numbers - on the public portal LutinX.com selecting the "Membership" section, for quick verification of them (so you can fight fake declarations from people that do no pay your fee).

More details can be requested directly from our offices.

Normally, the activation times of the Affiliate service take five working days.

7. How does it work

Training Institutions and Associations can apply their accreditation request according to the EDV02.1 model.

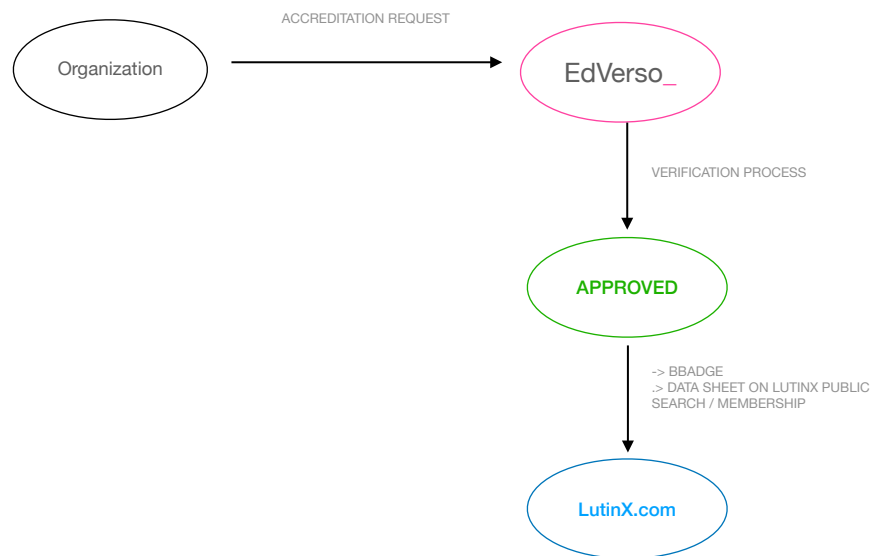

Edverso starts the Accreditation procedure, verifying the information provided, if necessary it carries out an interview with the owner and/or president of the requesting structure, and integrates - if necessary - the documentation initially provided to support the file.

In the event of a positive investigation, EdVerso:

- will activate, if not previously done by the same Entity, a verified account on the LutinX Blockchain Platform in the name of the newly Accredited legal entity, with the simultaneous assignment of the new reference LiD code (for subsequent use);
- will send via the LutinX system 3 (three) separate emails 1) confirming Accreditation, 2) containing the login code for accessing the web portal, and 3) the link for activating the password for accessing your account. Once logged in, it will be possible to set additional levels of security and protection of your account, such as a 4-digit numeric PIN and two-factor authentication (by Microsoft, by Google, with email);
- will send the Blockchain accreditation BBadge for the current year by email.
- will publish the new reference in the Membership area on LutinX.com.

The accreditation procedure starts at the following link: <https://gbpi.lutinx.com/act-edverso>

The analytical scheme:

Choose your BBadge design between the following:

B1

B4

NOTES:

- THE BBADGE IS VALID ONE YEAR..

- IF AVAILABLE, DISCOUNTS, AND PROMOTIONS WILL BE PUBLISHED OR SHARED ON OUR SOCIAL PAGES

NOTES:

- The accreditation process will take 48 hours **after the payment**. Please verify Annex A2 for the right price.

- If the process will NOT be Positive detailed reasons will be provided. A new accreditation process can be applied no earlier than 30 days after the negative result.

Annex A2 - Prices:

Please verify if this annex is the last one. Up-to-date amounts are always available online or at <https://gbpi.lutinx.com/act-edverso>.

The payment of the accreditation amounts can be applied by Paypal or Bank Transfer, invoiced by EdVerso International, Switzerland.

The Value Added Tax is equal to 0 (zero), with the only exception for Swiss entities, which corresponds to 7.7%.

EdVerso, following the approval of its Board of Directors, can authorize the issue of vouchers once or more times a year to facilitate the Accreditation process within the National growth plans defined by the Board itself.

2024 Accreditation and 2025 Renewal Fees:

	#First	#Renew
Public Organizzazioni	750€	500€
Private Organizations - With Legal Records	500€	350€
Private Organizations - turnover < 100'000€	100€	100€
Private Organizations - turnover < 500'000€	250€	100€
Private Organizations - turnover > 500'000€	500€	350€
Associations	250€	150€

2. *Support Fees 2024 - EUROPE:*

Private accreditation assistance	100€/hour/online (min. 1 hh)
Technical assistance for Website/SocialMedia	75€/hour/online (min. 1 hh)

3. *Paper Certificate Fees 2024 - EUROPE:*

Accreditation Certificate	50€/cd
Good Standing Payment	75€/cd
Shipping fees - Switzerland Post A	10€/cd
Shipping fees - Europe Post B	12€/cd
Shipping fees - Europe With Receipt	18€/cd
